Subject RE: OSS Addendum No. 2 letter

Chris,

DTSC's Comment No. 7 is applicable to the OSS WP. Here it is, somewhat modified:

Oxygen, carbon dioxide, and methane should be added to the list of constituents analyzed (possibly using a portable instrument) in the soil gas samples in support of the assessment of contaminant degradation. Soil gas samples should be collected by purging air from existing wells OW1A, OW7, and OW8A; these results will be used to assess contaminant vapor migration upgradient (OW1A, OW7) of the Omega property and contaminant volatilization from groundwater (OW1A, OW8A).

Tom
